Please amend the above-identified application as follows.

In the claims:

Please add new claims 27-32, as follows:

28
27. (New) A process for producing a crystalline energetic material, comprising:
preparing a crystallising mixture comprising a solvent and a raw energetic material
selected from the group consisting of HNF, CL-20, ADN, AP, RDX, HMX and PETN;
subjecting the crystallising mixture to ultrasonic vibration having a frequency of between
10 and 100 kHz and an amplitude of between 0.4 and 30 μ m during crystallization; and
harvesting a crystalline energetic material after the crystallization,
wherein the ultrasonic vibration results in a zone of ultrasonic vibration in the
crystallising mixture, wherein the crystallising mixture is stirred during crystallization and is
passing through the zone of ultrasonic vibration continuously, and wherein the crystalline
energetic material has increased thermal stability and decreased sensitivity with respect to the
raw energetic material.

29
28. (New) The process of claim 27, where the crystallization is carried out at a temperature
between 0°C and 100°C.

30
29. (New) The process of claim 28, where the crystallization is carried out at a temperature
between 15°C and 75°C.
